

# The new WätaS industrial heating strip 2.0

## Arguments:

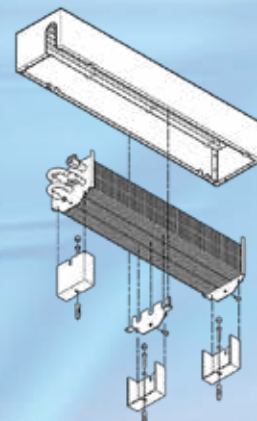

- Optimized low temperature convector
- Corrugated fins increase the transmission surface and create more heat
- Best controllability and swift heating due to low water content
- Low surface temperature
- Low construction heights and minimum depths enable an unobtrusive arrangement in front of interior walls
- Tailored to customer requirements
- Delivered ready to fit

## Versions:

- WätaS industrial heating 2.0 strip is realized in copper / aluminum
- Quick assembly system based on a one-piece cover and screwless mounting
- One way connection
- Through floor brackets installation on finished floor and raw concrete possible
- All trim parts incl. air outlet grille are constructed as linear grille and brackets made of sheet steel, with a permanent corrosion protection through powder-coating in different colours
- Heat output tested according to DIN EN 442

Free-standing convector for the low temperature range

Scope of delivery Hood convector with console for finished floor
